

PrestaShop Helpdesk {User- guide}

PrestaShop Helpdesk- This module is all about providing customers an interface where they can manage their pre-sale & post-sale queries easily by creating the tickets on the front-end. With this module, the admin can create groups, and agents and can assign different types of queries accordingly to the groups or agents. Once the visitor/customer generates the ticket, then the associate groups or agents can see the ticket based on the type of query. Also, the admin can access all the data i.e. Help tickets, customer information, and order information in one convenient location.

Features

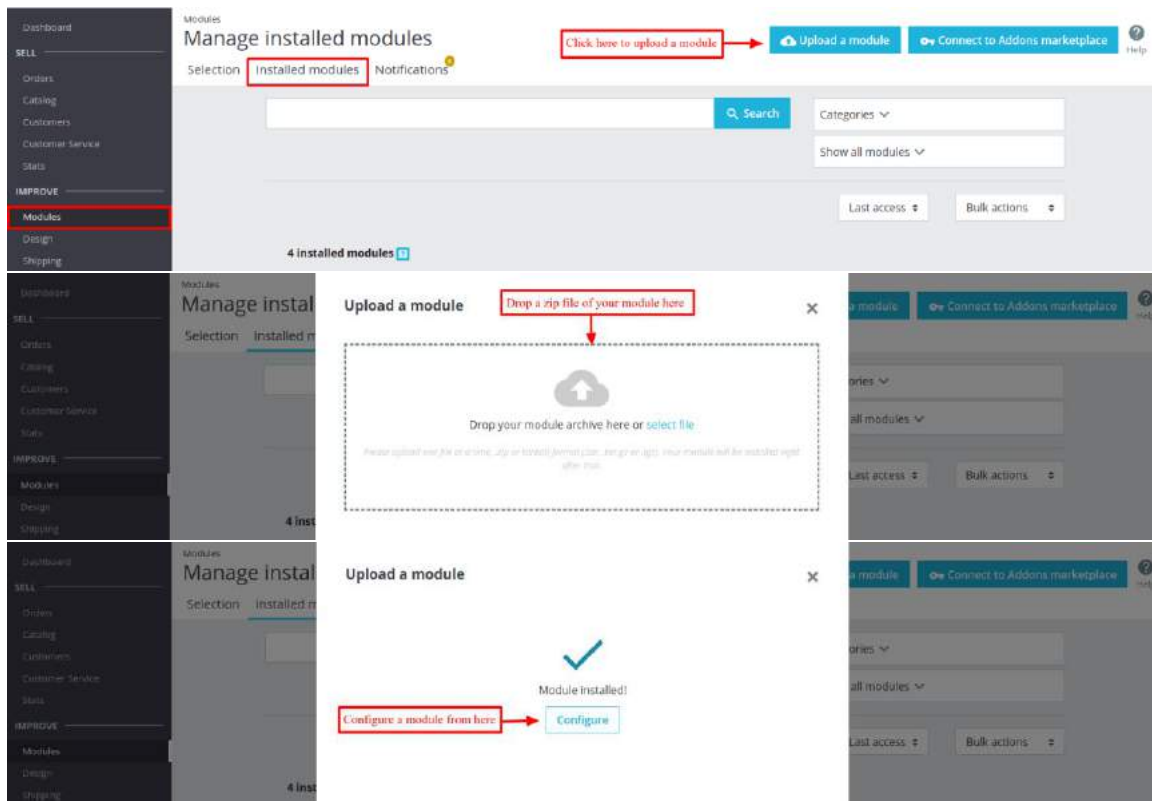

- Allows customers to contact the store admin regarding their queries.
- Allow/disallow visitors to create the tickets.
- Email notification to the customers on the creation of new tickets and change of ticket status.
- Validate the user by displaying reCAPTCHA on the ticket form.
- Filter tickets locally as well as globally on the system based on ticket number, customer, or query type.
- Create new tickets on behalf of the customers.
- Admin can import the emails as tickets manually.
- Also, the admin/agent can view the ticket generated on any order from the order listing page.
- Create multiple agents and assign them to multiple groups.
- Admin can create the custom ticket status.
- Improve customer service in your store.
- Customers can reply to a ticket directly from the email.
- Set cron to automatically import the emails as tickets.
- Admin/Agent can mark the user and mail as spam.
- Providing quick support will help you in building a strong relationship with your customers.
- Create multiple query types such as pre-sale queries, post-sale queries, support-related queries, etc.

NOTE:

- Our module is completely [GDPR compliant](#).
- This module is multishop compatible.

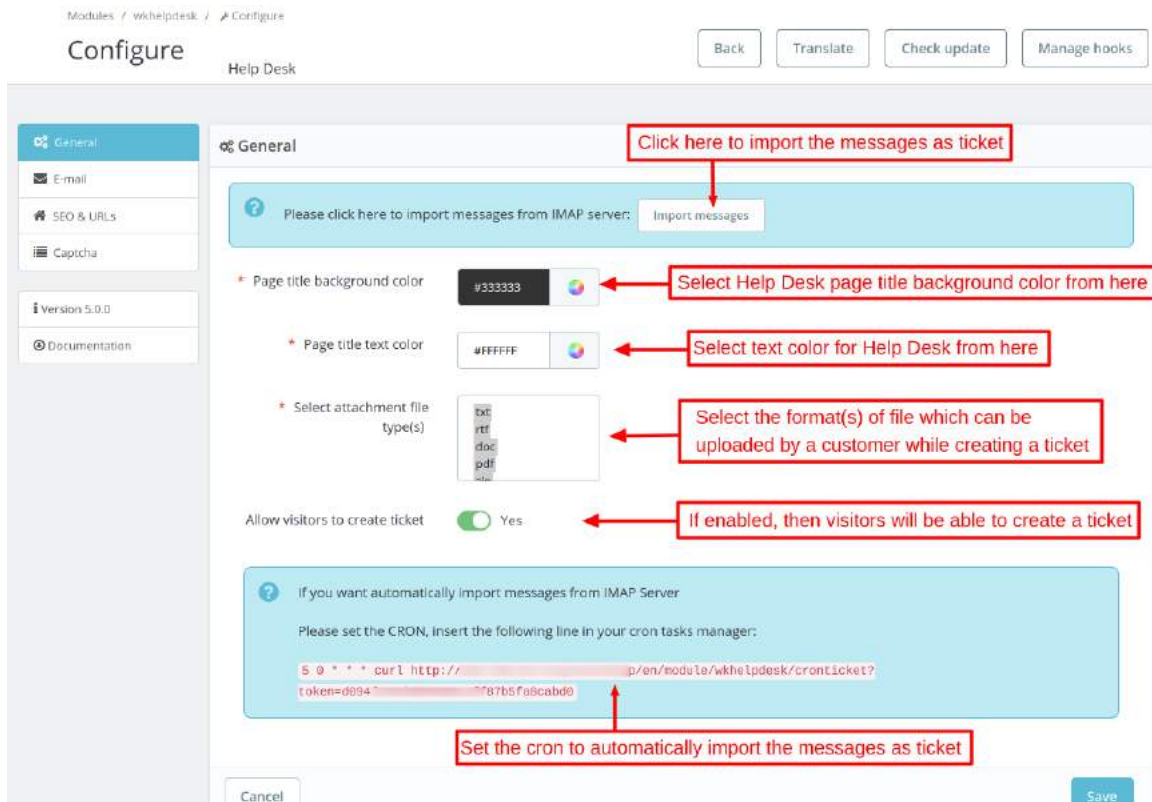

Installation

1. Go to the back office-> modules -> modules & services -> Upload a module.
2. Upload zip file of "Help Desk" module.
3. The module will automatically get installed on your PrestaShop.

Configuration

After successful installation, the admin has to configure the module settings.

General

Under "General", the admin can import the new emails as tickets, select the background color & text color of the Help Desk Page to display at the front end, and file type(s) to upload by a customer while creating a ticket, allow/disallow visitors to create a ticket, and set the cron for automatically import the new emails as the ticket.

- **Import new messages as tickets**

With the option "Import messages", when the admin clicks on this option only then, the new messages will be imported as tickets. If the admin doesn't set the cron then the admin has to import the emails manually by clicking on the import button.

- **Allow Visitors to create a ticket**

A visitor can also create a ticket at the front end if the admin enables this option.

Spam User Tickets

Under this tab, the admin can see all the users he marked as spam. The admin can mark any user as spam from the ticket generated by the user, if the admin finds any suspicious activity by the user.

The admin can mark the user as spam from the ticket only, which is generated by the user.

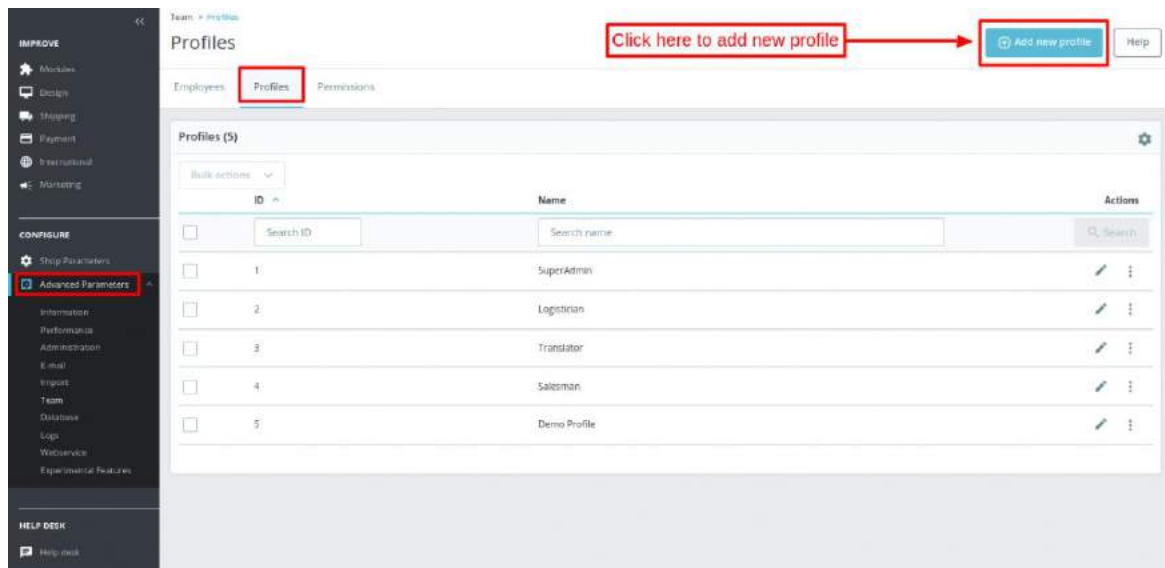

Agents

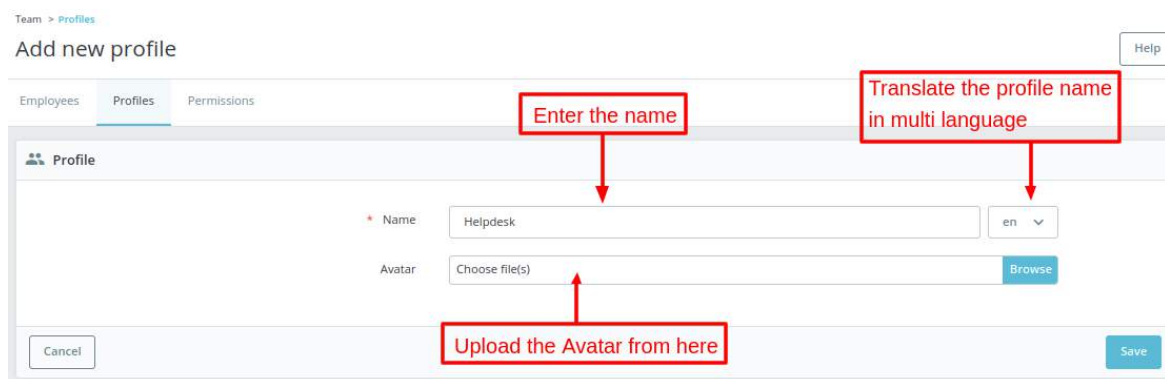

Under this tab, the admin can create the agents and assign every agent to a particular group. Each group will associate with a query type. Any customer ticket with that query type will handle by the agents of that group.

Note: Before creating agents, the admin has to create a profile on PrestaShop.

Go to Advanced Parameters -> Team -> Profiles

On clicking "Add new profile", the admin has to enter the name of the "Profile" & then "Save".

Once the Profile has been created, they will display on the "Profiles" page.

Profiles (7)

Group Management

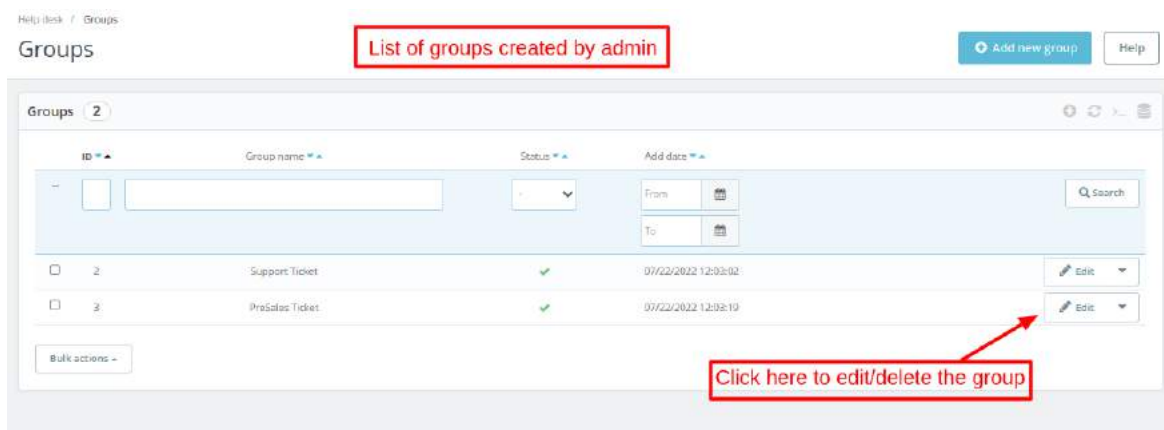

After creating agents, the admin has to assign these agents to certain groups. These groups are created on the basis of their departments or queries.

Admin can create new groups by clicking on the "Add new group" button. Admin will have to enter the name of the group & assign the agents to that particular group.

Once the groups have been created, the list of groups will display on the "Groups" page.

Ticket Status

The admin can add the new custom ticket status from the back office as per their requirement. By default, the admin gets six ticket statuses and the admin can edit them also.

Query Types

An eCommerce site can have any kind of queries such as pre-sale queries, post-sale queries, support-related queries, etc. It is important to create the query type and assign them to a particular group so that only the agents of the assigned group can see the ticket of the particular type of query.

Help desk / Query types

Query types List of all Query Types created by admin will be displayed here [Add new query type](#) [Help](#)

Reply on the ticket by Admin

Admin can reply to the customer by clicking on Ticket ID or Subject to.

Note:- There are three types of replies that can be made on a ticket-

- Reply- Customer will receive a message.
- Internal Note- If the agent wants to save certain important information related to the ticket, then the agent can use an internal note. This will not be visible to the customers.
- Forward- With this agent can assign the ticket to any other agent.

The agent will receive the mail when the customer again replies to the ticket. The status of the ticket will change from answered to open as per the mapping.

The screenshot shows a help desk interface with a sidebar for filtering tickets and a main area displaying a list of open tickets. A red box highlights the 'OPEN' status filter, with a red arrow pointing to it and a text label 'Ticket status updated to "Open" again'.
